

Corporate TB Pledge

Ending TB by 2030 is a global commitment under Sustainable Development Goal 3, which calls for wide-ranging partnerships beyond the public sector. India has the world's highest TB burden, killing roughly one person every minute. Due to this high burden, the Government of India has set a more aggressive target of eliminating TB in India by 2025.

I/We acknowledge that businesses have unique skill sets and are an important part of society, making it indispensable for enterprises to take a proactive role in the fight against TB. TB adversely affects the lives and livelihoods of employees and poses a serious threat to enterprise performance due to increased absenteeism, disruption of operations, and increased expenditures on employee treatment.

I/We pledge to undertake sincere efforts to provide leadership in the fight against TB for the betterment of our company, employees, their families, and the community.

As a silver member of the TB Pledge, we will commit to take concrete steps to advocate for a greater response to TB in partnership with the Government of India.

As a gold member of the TB Pledge, we will also raise awareness on issues surrounding TB in our workplace and in our community in the coming year.

As a platinum member of the TB Pledge, we will also invest corporate social responsibility resources for TB activities and/or invest in TB workplace programs in the coming year.

As a diamond member of the TB Pledge, we will champion corporate involvement in the fight to end TB. In the coming year, we will invest our own resources and mobilize resources from other corporates to join the fight.
